

Diabetes Clinical Medication Management

Date and Time:

June 23, 2008 (Monday)

9:00 AM – 12:00 Noon; 2:00 PM – 4:30 PM

and

June 24, 2008 (Tuesday)

9:00 AM – 12:00 Noon; 2:00 PM – 3:30 PM

Target audience:

Diabetes care managers and other clinicians involved in the care of diabetic patients in both inpatient and outpatient areas

Learning Objectives:

Upon completion of this program, each participant will be able to:

1. List the indications, actions, contraindications and target organs for each category of oral agents.
2. Describe the protocols for the initiation of oral agents.
3. Discuss the goals of medical nutrition therapy.
4. Discuss various methods used in meal planning.
5. Given hypothetical case studies, identify the most appropriate oral agents to use for individuals with Type 2 diabetes.
6. Describe foot screening examination.
7. Discuss insulin therapy as it relates to individuals with Type 1 and Type 2 diabetes.
8. Distinguish the differences in terms of action, onset, peak and duration of each of the available insulin preparations.
9. Illustrate practical approaches to starting basal and bolus insulin.
10. Apply insulin pattern management to correct out-of-target blood glucose readings.
11. Given hypothetical cases, choose the most appropriate insulin regimen, considering the patients' lifestyle, eating, and activity patterns.
